

Come Join The Fun

R/C Tank Combat battles are held throughout the year in a growing number of places around the country. We also get together off the battlefield to work on our vehicles, participate in other scale model events, and to see how the real vehicles actually looked and worked.

We're always looking to welcome new members.

The best way to get started is to join our mailing list and we'll put you in contact with a battler in your area. After you've seen one or two of the vehicles, we know you'll want to get started on the construction of your own, unstoppable vehicle.

But, don't forget... there's probably someone waiting in the trees ready to prove you wrong!!

R/C TANK COMBAT

The Ultimate Tactical Warfare Game

The R/C Tank Combat hobby is dedicated to the battling of radio-controlled large-scale model tanks, armored cars and artillery. All combat is waged using standard, readily available paintball equipment, allowing realistic and safe tactical battles. The hobby combines the challenges of building large-scale, fully-operational models, with the thrill of real-time combat against skilled opponents.

It's Not Just About Building Tanks ...

The large scale used for R/C Tank Combat (1:6 scale or larger) makes it possible to outfit vehicles with all of the equipment needed to wage war. But, it also makes it more challenging to build. Fortunately, the process of constructing an R/C combat vehicle is relatively straight-forward and all of the required systems can be constructed from parts purchased from surplus catalogs, hardware stores and, of course, flea markets.

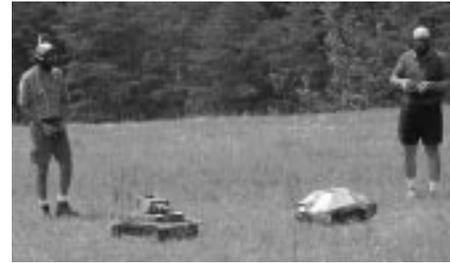

The R/C Tank Combat web site has a collection of tutorials that focus on building an R/C combat vehicle for the first time, as well as explanations of all the systems needed to be successful on the battlefield.

And if you can't figure out something in the workshop, you can always post a message to our electronic mailing list to get back more information than you ever really wanted from battlers around the world ... *how's that for service?*

It's Also About Battling Tanks ...

It's truly amazing how things can work so well in the workshop, only to fail on the battlefield when you're being chased by another tank or two that are fully loaded!!

That's why it's so important to design your vehicle to be easily and quickly fixed in the field and to trust in your teammates to keep you safe in the process. Individual battlers get wiped out easily ... *teams survive and thrive.*

And it isn't just a "wild-west-shoot-out". The rules have been designed to require everyone on the field to think tactically and strategically about how to best attack the other team, while keeping your resources safe. Supply vehicles, field artillery and rocket launchers are all there as well, to keep the tanks and armored cars supplied and ready for action.

Did we leave something out?
